A. Content & Audience

1. Did your peers clearly understand your site's purpose and target audience?

   Yes, they did understand my website's purpose. They were able to find the purpose of my website in a reasonable time. I have descriptions on each page for this purpose of helping new users understand not only each page, but the website as a whole.

2. What suggestions did they make to improve your site's content or messaging?

   They suggested filling out the homepage a little more because the bottom feels empty and improving the alignment of the "Today's Meal Plan" text. They also recommended making the site's links easier to read and navigate. I also should highlight the current page in the header, and fix the trainer search table so it fits properly on mobile devices. They liked the website's sleek design, layout, and clear messaging.

B. Design & User Experience

3. How did your peers respond to your site's design (layout, color, typography, or organization)?

   My partners responded well to my website's overall design. They liked the clean layout and spacing on the "Your Trainer" page. They found the design easy on the eyes and also liked how the elements were organized. One suggestion was making links larger so they are easier to click and optimizing images to improve loading times.

4. Did they find the design effective in communicating your message and engaging users?

   Yes, they found that design was effective in communicating my website's purpose. They liked the interactive feature that allows users to enter their name, fitness goal, and trainer they want. This feature made the experience more engaging and helped users connect with a trainer.

C. Functionality & Performance

5. What issues did your peers identify with features or interactivity on your site?

   They highlighted some layout issues in the "Your Trainer" and "Trainer Search" pages. There was some awkward text wrapping, the table overflowing on smaller screens, and there were also images going out of their containers. They also suggested adding padding to touch targets and improving the styling and spacing of the links at the bottom of the homepage.

6. Did they note any pages or elements that loaded slowly or inconsistently across devices or browsers?

   They noted down that the “Trainer Search” page does not appear consistently on smaller screens, the biggest issue of this was the images overflowing. They also suggested optimizing images to reduce loading times.

D. Accessibility & Usability

7. What feedback did you receive about accessibility (e.g., alt text, color contrast, keyboard navigation)?

   They talked about some accessibility warnings on the “Trainer Search” page. They got some alerts about orphaned form labels, missing page regions, and my embedded YouTube video. They also noted that the homepage links were too close together so they were hard to select because of that lack of space.

8. What can you improve to make your site more inclusive and user-friendly?

   Some ways I can improve accessibility is by connecting form labels to their inputs and adding appropriate page region. I will also check the YouTube video to make sure everything is accessible there. I can also add padding between homepage links.

E. Action Plan

9. What did your peers like most about your site?

   My peers liked the website’s sleek design and clean layout. They liked how easy it was to understand my purpose. Another thing they liked was the “Your Trainer” page spacing and the interactive feature letting users choose a trainer based on their fitness goals.

10. What two improvements will you make based on their feedback, and how will you implement them?

    First, I will improve the website’s responsiveness by fixing the trainer table, image overflow, and text on smaller screens through my CSS code. My second improvement is to change the accessibility and navigation by adding padding in between links and touch targets and fixing accessibility warnings on my form labels.
